LAGUZ

The Łaguz family has been manufacturing products made of wood and plastic **since 1968**. Years of experience have resulted in a wide range of products dedicated to the horticultural, agricultural and construction industries. At present, as the **LAGUZ Production Group**, it designs and successfully launches modern and functional product lines. At the same time, we do not forget about ecology in production and cost-efficiency in the use of our products. These are our main goals.

The constant pursuit of excellence and innovative approach does not let us stop. In 2021 we introduced 2 lines of metal tools. More products soon. Our success is customer satisfaction.

The LAGUZ Production Group is a socially responsible company. We manufacture 100% of our products in Poland, in the plants of Łaguz family and Polish partners only.

DESCRIPTION OF PRODUCT GROUPS:

1. **The Polish KLIK System** is the flagship product of the LAGUZ Group. An innovative approach to home and garden tools. 17 tools for sweeping, washing up, raking and garden care are connected with the KLIK ratchet with a modern aluminium shaft or, if you prefer, each KLIK tool can be combined with a wooden shaft.

Advantages of the Polish KLIK system:

- a. Ecology. 2 aluminium shafts, 140 cm and 38 cm, instead of 17 wooden ones
- b. Cost-efficiency. The cost of a shaft lower than 17.
- c. Functionality. The best brushes, rakes and metal tools in the system.
- d. Compatibility. The KLIK shaft can be combined with tools by other manufacturers, and the KLIK tools fit all shafts compliant with the DIN technical standard.
- e. Minimalism. The complete KLIK System requires a minimum of storage space.

2. **Plastic tools.**

Garden and agricultural rakes as well as small tools for seedling and plant care. Made of highest quality technical and composite materials.

3. **Metal garden tools. 2 quality lines.**

- professional line. Silver tools. Designed for intensive work, technically advanced with a sophisticated design.
- economic line. Black tools with an ecological wooden shaft. Light and cheap.

4. **Brushes.**

A wide range. From modern 2in1 Hybrid brushes to small household brushes. We manufacture from ecological natural raw materials, durable synthetic fibres and technically advanced composite fibres.

5. **Wooden handles.**

It is these products we started with. The production philosophy has changed. Currently, a wooden shaft is a spare part for tools. Each LAGUZ handle is manufactured in accordance with a technical standard, and must be perfectly matched to the hole in the tool.

6. **Winter snow removal products.**

82 cm shovels and scrapers for snow. Made of modern construction plastic with increased mechanical strength in a large temperature range. Ice breakers, hardened and galvanized.

7. **Sorghum brooms.**

Three sizes. Traditional brooms made of sorghum straw

Terms of cooperation:

1. Long payment terms. Prepayment for first 3 deliveries.
2. Fast delivery. Production in Poland shortens the supply chain.
3. 100% right of return - indefinitely, without providing reasons. Professional line products only.
4. Products compliant with international technical standards.
5. Each product is precisely marked with the EAN code and an additional description.
6. Logistic minimum of PLN 2,000 net.
7. Free transport from the order worth PLN 2000 net.
8. Professional displays and shelves for products.
